

HASHAAM AHMAD

University assignment

OBJECTIVE

Enthusiastic and detail-oriented Industrial and Manufacturing Engineering student with a strong foundation in production processes, manufacturing systems, and operational efficiency. Eager to apply academic knowledge in real-world scenarios and gain hands-on experience in the engineering industry.

EDUCATION

Bachelor of Science (BSc) in Industrial and Manufacturing Engineering

[University of engineering and Technology], [Lahore] — *Expected [2027]*

Courses: Manufacturing Processes, Industrial Safety, Quality Control, Operations Management

Intermediate in Pre-Engineering (FSc – Mathematics, Physics, Chemistry)

[Unique College], [Lahore] — [2023]

Matriculation in Science (Biology Group)

[Govt. School], [Lahore] — [2021]

ACADEMIC PROJECTS

EDM Parameter Optimization

Investigated the effect of off-time on MRR and surface finish using copper, brass, and aluminum electrodes in die-sinker EDM machining. Analyzed data for optimizing process parameters.

2D Mechanical Component Design in AutoCAD

Designed various mechanical parts including shafts, brackets, gears, and housings using AutoCAD. Focused on dimensioning, tolerance representation, and orthographic projection.

Conventional Machining Process Study

Performed turning and facing operations on mild steel using a lathe. Analyzed tool life, cutting force, and surface finish with varied process parameters.

Analysis of Cutting Parameters in Conventional Lathe Machining

Conducted turning operations on mild steel using a manual lathe. Investigated the effects of speed, feed, and depth of cut on surface roughness and tool wear. Collected data and plotted machining performance trends.

Workshop Project: Manual Machining of stud Bolt

Used traditional milling and lathe machines to manufacture a precision bolt. Included facing, turning, threading, and knurling operations. Measured dimensions using a Vernier caliper and checked tolerances as per drawing.

Cam-Follower Mechanism Study

Designed and analyzed a cam profile to achieve a specific follower motion (rise-dwell-return). Studied types of cam followers and calculated displacement, velocity, and acceleration profiles for a given input.

SKILLS
